

Findings

- Over the years **active customers grew**, and **inactive customers grew** too. At the end of the dataset there are **449 Active**, **168 Inactive**, and **18 At-Risk** wholesale customers (by last-order timing).
- **Top territories by revenue: Southwest, Canada, Northwest.** **Canada** and **Northwest** have a **lower share of inactive** customers than Southwest. **Southeast** is the **riskiest** (~28% inactive).
- **Top-10 Active customers** generate ~9.84% of wholesale revenue. Each has **8–12 orders**; many became customers in the **first year** of the dataset. The main product is **Bikes**. **Six** are from the **West Coast** and **Canada**, which matches the territory revenue chart.
- **Top-10 Inactive customers** account for ~5% of wholesale revenue. Each has **4–8 orders** and **stopped ordering 1–2 years** before the dataset end. **Six** are from the **southern US coasts**. **Southeast and Southwest** have the **highest inactive** percentages.
- **Order mix by category:** Accessories & Components make up most **orders**, while **Bikes** are a **small share of orders** but a **large share of revenue**—evidence of very high Bike AOV.
- **AOV (Average Order Value):** **Inactive AOV is the highest** (lost bigger orders), **Active AOV** is strong, and **At-Risk AOV** is lower—suggesting orders shrink before churn.

Insights

- **Top-10 customers matter:** They drive ~9.84% of total revenue—about **1% each** on average.
- **Reactivation upside:** **Inactive AOV is the highest**; winning back even a few lapsed accounts could recover meaningful revenue.
- **Geography matters:** **Canada/Northwest** are healthier (lower inactive share), while the **Southeast** needs targeted action.
- **Revenue concentration risk:** Because Bikes are low-frequency, high-value, overall revenue is sensitive to small swings in Bike order count.

- **Stabilize with attach:** Use Accessories/Components to raise order **frequency** between Bike purchases; treat Bikes as the **anchor** and accessories as the **stabilizer**.

Data-Driven Decisions (what to do)

Prioritize & maintain the Top-10 Active

- Faster order processing, priority support.
- Perks: early access to new models, preferred pricing, expedited shipping.
- Quarterly check-ins.

Grow Bike orders

- Set a target for the **% of orders that are Bikes** by store/territory; track weekly.
- Sell add-ons with every Bike: create **Bike + Accessories/Components** bundles; track **attach rate** and **AOV by category**.

Win back the Top-10 Inactive

- Time-boxed offers (discount or shipping credit); consider **installment plans** for large Bike orders.
- Target lapsed Bike buyers with **service/upgrade** campaigns (tune-ups, components, seasonal add-ons).
- Short “**why did you stop?**” outreach; tailor the offer to the reason.

Next steps for analysis

- **At-Risk funnel:** how many move back to Active vs become Inactive (by territory/sales team)?
- **Attach rates:** where can Accessories/Components be sold with Bikes to lift AOV?
- **Territory playbooks:** apply Canada/Northwest tactics in the Southeast and track change in inactive share.
